C Nikou -Digital Image Processing The LoG operator •A good place to look for edges is the maxima of the first derivative or the zeros of the second derivative •The 2D extension approximates the second derivative by the Laplacian operator (which is rotationally invariant): $\nabla^2 f(x,y) = f_{xx} + f_{yy}$

IMAGE COMPRESSION METHODOLOGIES - Shodhganga

Image compression research aims at reducing the numbers of bits needed to represent an image by removing the spatial and spectral redundancies as much as possible [2][4] Data redundancy is a central issue in digital image compression It is not an abstract concept but a mathematically quantifiable entity
